

## A MESSAGE FROM THE MALLS COMMITTEE

"We have been fortunate to escape recent tropical storms, hurricanes, and associated flooding. If we look at our drainage areas, and easements they are cluttered with vegetation and man-made structures. We can prevent flooding in our neighborhood by cleaning these areas. The county will clean official drainage areas if there are not fences or structures impeding their access. Please look at the maps on the WPHA website to determine if there is an easement or drainage area on your property, and if there is anything in that area preventing proper drainage. We will be working with the County to address known drainage problems in our neighborhood. Please do your part by cleaning any area on your property that may prevent drainage."
